# SPECIALIST FIXTURE SOLUTIONS

ATX is Europe's market leader in the manufacture of test fixtures for electronic test procedures.

Why you too should choose an ATX fixture - it's simple:

## TECHNICAL KNOW-HOW

Our sales team is technically well versed - our consultants are selected from the design team or other technical departments.

## PROJECT KNOW-HOW

We work together with you towards a common goal: to find and implement the optimal solution for your individual testing requirements.

## KNOWLEDGE BASE

Our employees bring well over 1,000 man-years of fixture building experience to the team.

# SINCE 1997

## FIXTURE ASSEMBLY

# PNEUMATIC FIXTURE

## HIGHLIGHTS

- Individually expandable
- Versatile equipment
- Cost effective
- Easy to control
- Bi-level capable

## MEP - PNEUMATIC FIXTURE

### Maximum comfort with the highest output

ATX's MEP device model is perfect if you want to bring exceptional flexibility to your test and inspection area with the simplest control via the compressed air valve. As a standalone fixture, your MEP is perfect for functional testing, final testing and smaller ICT applications up to 1,000 N. With your MEP it is very easy to increase the number of cycles without spending more power. Thus, our MEP is exemplary for fatigue-free works. Its cover opens automatically and thus also ensures the fast ejection of defect-free parts.

Thanks to its compact design and space-saving mechanics, you can flexibly combine it with numerous additional components. A special product advantage that is only available with ATX: Our MEP is also optionally bi-level capable and furthermore available in the special version with pylon interface if required. It was tested at ATX with over 1 million strokes under full load for its superior endurance capability. It passed this test with flying colors, making it perfect for your high-volume production.

## MOVING SECTION

### MEP

The moving section of the cassette contains an integrated brass plate which short-circuits three probes (probes not fitted) – can be used as a starting signal.

## STANDALONE FIXTURE LEGENDE

### Pneumatic fixture

MEP-Standard height

MEP-Special height

Moving plate dimension X x Y

# PNEUMATIC FIXTURE

## PNEUMATIC FIXTURE

Designation	Fixture	Moving plate (X x Y)	Standard housing	Order number
MEP-A		173 x 310	E01-00145	100233
MEP-B*		275 x 310	E01-00001	100811
MEP-C*		445 x 310	E01-00002	100812

All fixtures marked with \* are also available with a ahigh housing.

## AVAILABLE HOUSING TYPES

### FOR MEP TO FIT FLEXIBLY INTO YOUR TEST ENVIRONMENT

Housing with back panel (connectors can be mounted as required)

#### E01-00145

Standard housing for MEP-A

#### E01-00001

Standard housing for MEP-B

#### E01-00012

High housing for MEP-B

# AVAILABLE HOUSING TYPES

## FOR MEP TO FIT FLEXIBLY INTO YOUR TEST ENVIRONMENT

Housing with back panel (connectors can be mounted as required)

### E01-00002

Standard housing for MEP-C

### E01-00025

High housing for MEP-C

# INTERFACE

## POSSIBILITY OF MOUNTING AN INTERFACE ON THE REAR WALL

The GFK-Aperture is installed in our test fixtures as standard. All other interface mounting options can be ordered with or without the respective interface.

Interface Housing	GFK-Aperture	Pylon	VPC G12	VPC G12X	VPC G20	VPC G25	Reinhardt
E01-00001	x						
E01-00002	x	x					
E01-00012	x						
E01-00025	x	x	x	x		x	
E01-00145	x						

The assignments shown above are standard designs. However, due to our high variety of housings, special designs can be made after consultation.

# PNEUMATIC EXCHANGEABLE CASSETTE SYSTEM

## MEPW - PNEUMATIC EXCHANGEABLE CASSETTE SYSTEM

### Maximum dynamics with integrated exchangeable cassette system

As an attractive alternative, we can also offer you this model as a MEPW product variant with pneumatic exchangeable cassette system. The cost-effective cassette solution is suitable for many changing products and saves you a lot of time during product changeover thanks to tool-free changeover.

Further advantages are minimal maintenance and shorter set-up times due to the wear-resistant interface. Individual interfaces for special pins such as HF, power or compressed air transfers are available.

## MOVING SECTION

### MEPW

The moving section of the cassette contains an integrated brass plate which short-circuits three probes (probes not fitted) – can be used as a starting signal.

E01-00115		X						
E01-00116		X						
E01-00117		X	X	X				
E01-00118		X	X	X	X	X	X	

The assignments shown above are standard designs. However, due to our high variety of housings, special designs can be made after consultation.

# PNEUMATIC FIXTURE

## HIGHLIGHTS

- Large opening angle
- Auto-open-close function
- Safety concept
- Exchangeable system variant

## MEP100 - PNEUMATIC FIXTURE

### Automatic testing

The MEP100 is your fixture when it comes to flexibility and automation. Thanks to the different mode variants such as „independent opening and closing“, „opening only, manual closing“ or „completely manually operated“, you can integrate the fixture completely freely into your production processes and flexibly allocate your capacities. It does not matter whether you operate it with your personnel or with a robot. A sophisticated safety concept has been developed to ensure safe operation. A combination of patented safety mechanics and monitoring by a safety PLC prevents any dangers for your employees.

For easy use, the control system has already been pre-programmed and the MEP100 can be conveniently connected to any desired test system via potential-free inputs. Another advantage: The connection of all possible interfaces as well as different housing variants are easily configurable.

### Robust and precise

An enlarged opening angle gives both your employees and the robot used plenty of space for loading and unloading the assemblies. We also continue to rely on the proven MEP mechanics, which has already proven its reliability in millions of assemblies. The MEP100 is therefore highly valued, especially in high-volume production, and is regarded as robust and precise.

E01-00133	X	X	X			X	

The assignments shown above are standard designs. However, due to our high variety of housings, special designs can be made after consultation.

# PNEUMATIC EXCHANGEABLE CASSETTE SYSTEM

## HIGHLIGHTS

- Exchangeable cassette system
- Auto-open-close function
- Safety concept
- Bi-level compatible

## MEP100W - PNEUMATIC EXCHANGEABLE CASSETTE SYSTEM

### Economical and automatic testing

The MEP100W combines the advantages of the MEP100 with an economical exchangeable cassette system. By exchanging a simple exchangeable cassette, product changeover can be carried out easily and inexpensively. The basic unit with the control system and the auto open - auto close mechanism only needs to be purchased once and can remain on the test system.

Optionally, the cassette can be interrogated with a coding. An interlock system is then used to exclude an incorrect combination of upper and lower part, thus preventing damage to an assembly or an exchangeable cassette. This interlock system can also be used as a positive locking device for safety-related voltages or other dangers. The coding interface in the hold-down plate can be combined with a pneumatic transfer. This means that pneumatics are also available on the top side. The interface is designed for 480 pins and can be extended with special pins such as HF or high-current pins. As an option, expansion as a bi-level device (2 stages for separation of FKT and ICT) is also available.
