

MORE THAN JUST A RELOCATION
We set new standards for your success!

Our new company building opens up completely new dimensions for us - and for you.

Our new premises are far more than just a new building - they are the foundation for an expanded portfolio, optimum flexibility, maximum precision and pioneering innovations. The new location not only offers more storage capacity, but also more space for large-scale customised adaptations with automation and large testing systems. For you, this means more space and capacity for demanding, customised projects - from the initial idea through to implementation.

STANDARD VERSIONS OF THE LHS2-SERIES NOW IN STOCK

The linear arm fixture for small series, development, programming or laboratory tasks

We have considerably expanded our storage capacities to ensure standardised stock-keeping of selected product lines. As a result, we can now always supply the standard version of the LHS2-series test fixtures from stock. This means for you: immediately available test fixture kits without additional options and extensions*, exactly when you need them.

Thanks to this extended capacity, you benefit from faster availability and can plan your projects precisely without having to worry about delays. Our simple ordering process enables direct and uncomplicated ordering, which increases your flexibility and optimises the processing of your orders.

Our new storage solutions set standards in terms of delivery speed and offer you the planning security you need for the success of your projects.
