

MANUAL BUTTON ACTUATOR | VERTICAL

For vertical buttons

Reliable manual operation of vertical buttons

Our manual button actuator | vertical enables precise and space-saving manual operation of vertical buttons on PCBs. This solution makes it possible to operate the components during testing under a closed bonnet in both the mechanical and vacuum areas.

Manual button actuator | vertical

120354*
B03-00170
Vacuum fixture

120604*
B03-00198
Mechanical fixture

*Includes fixing material (screw & dowel pin)

Further versions

In addition to manual button actuator | vertical for vertical buttons, there is also a manual button actuator | 90° deflection for horizontal buttons and switches available.

General data

Article number:	120354 (Vacuum fixture) 120604 (Mechanical fixture)
Product:	Manual button actuator
Product type:	Vertical
Product family:	Test fixture accessories
Accessory type:	Expansion accessory
Retrofittable:	Yes

Technical data

Stroke:	7 mm
Assembly:	4 mm drill hole
Length:	69 mm
Adjustable length:	42 mm
Diameter head:	6,5 mm

Compatibility

The manual button actuator | vertical can be used individually and in any test system in which vertical buttons have to be operated from above - whether mechanical or vacuum.

ADVANTAGES

- ✓ Simple installation
- ✓ Individually adjustable
- ✓ Optional vacuum tight
- ✓ Cost-efficient solution
