

MANUAL BUTTON ACTUATOR

Vertical | 90° deflection

Reliable manual operation of vertical/horizontal buttons & switches

Our manual button actuators enable precise and space-saving manual operation of vertical/horizontal buttons and switches on PCBs. This solution makes it possible to operate the components during testing under a closed bonnet in both the mechanical and vacuum areas.

Versions

Our manual button actuators are available in two versions:

- ✓ **Vertical button actuators** for vertical buttons
- ✓ **90° deflection button actuators** for horizontal buttons and switches

Compatibility

Both the vertical button actuators and the 90° deflection button actuators can be used individually in any test system in which vertical/horizontal buttons and switches have to be operated during the test procedure - whether mechanical or vacuum.

ORDER NOW!

And secure exclusive benefits

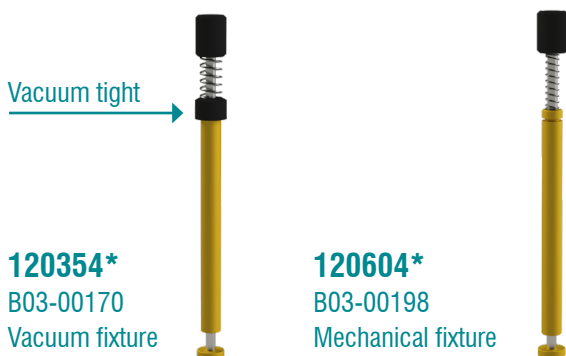

- ✓ Simple installation
- ✓ Individually adjustable
- ✓ Optional vacuum tight
- ✓ Cost-efficient solution
